

Chandresh Bhagat

Bridge Road, Westmead 2145

chandresh.bhagat89@gmail.com

0415 657 181

Summary:

- Considerable experience in workplace health and safety practices.
- Experience in the design, project management, operation, and troubleshooting of equipment in plant.
- Working knowledge of control system including SAP, CMMS, PLC, HMI, and SCADA.
- Ability to interpret national codes & standards, such as ASME, IMC, and ANSI.

Education:

University of Technology Sydney, Ultimo, Sydney

Master's in Mechanical Engineering and Management, Specialized in Manufacturing

2018 - 2020

Gujarat Technological University, Ahmedabad

Bachelor of Engineering - BE, Mechanical Engineering

2013 - 2017

Work Experience:

Engineer Technical Services

Baxter Healthcare, Old Toongabbie

Dec 2021 – Jan 2023

- Designed and developed technical solutions that meet client requirements.
- Collaborated with cross-functional teams to identify and resolve technical issues.
- Provide support in complex preventive/predictive maintenance of packaging equipment using the appropriate job plans, procedures, and manuals.
- Conducted machine calibration and assist in preventive maintenance activities.
- Troubleshooted and repair equipment failures to ensure Production downtime is kept to a minimum.
- Continuously monitor and adjust the process based on upstream and downstream production needs.
- Conducted tests and assessments to evaluate system performance and identify areas for improvement.
- Created technical documentation, such as user manuals, technical specifications, and system diagrams.
- Organized projects and timelines to ensure deliverables are completed on time and within budget.
- Staying up to date with new technologies and industry trends to ensure systems are current and efficient.
- Improved utilization of resources and maintain service documentation via (CMMS), and sales order using SAP.

Graduate Mechanical Engineer

Jalco Homecare, Smithfield

Nov 2020 – Oct 2021

- Conducted research on relevant regulations and standards to ensure compliance.
- Designed and developed new cleaning product by improving manufacturing processes.
- Developed production output reports and discuss with key stakeholders on daily basis.
- Worked with engineering team and aid ongoing projects for the site.

- Generated CAD layout of the site using AutoCAD.
- Write technical documents for production line maintenance and safety procedures.
- Identifying inefficiencies in the production line and discuss with team on possible opportunities for improvement.
- Planned and scheduled preventive maintenance using MEX.
- Worked in a cross functional team in continuous improvement projects to reduce operational cost using lean manufacturing tools and provide support to procurement.

Internship

Indian Oil Corp Limited, India

May 2016 - Jun 2016 (2 months)

- Observation and training in the field on implementing work protection policies and procedures for pumps, motors, fans, heat exchangers, pressurised vessels, gas analyzers, filters, and other plant equipment.
- Participated in training and development activities to enhance skills and knowledge.

Projects:

Applications and advantages of composites materials used in aerospace manufacturing

University of Technology Sydney (2021)

- In aerospace the performance criteria placed upon materials can be far greater than in other areas – so our project key aspects to create lightweight, high-strength & stiffness and good fatigue resilience.
- In this project the materials of fiber reinforced polymer composites (FRPs) used for aircraft applications is a relatively small percentage of total use, the materials often find their most sophisticated applications in this project.

Thermal Performance Evaluation of Combine Solar Water Heater and Gas Geyser System

Gujarat Technological University (2017)

- The solar energy is free energy and available in the ample amount and solar energy can be used for cooking, heating, and power generation purpose.
- In the solar water heater, the water which is heated can be used for bath purpose and to maintain temperature in the winter days is difficult so in the present work the water stored in the insulated tank of solar water heater will be supplied gas geyser as water is pre heated so the gas consumption will decrease in case of gas geyser.

Skills:

- Safety first attitude • FMEA • Corrective and Preventive Action (CAPA) • GD&T • Continuous Improvement
- Project Management • REVIT • HVAC • SAP
